

My name is **Maxim Nazarenko**, I am a 2012 graduate of Industrial University of Tyumen (IUT) with a major in Petroleum Engineering. Presently, I am employed in a Russian company on one of the biggest foreign oil fields. In our company, both Russian and English are corporate languages, i.e. all the documents and communication are carrying out in English. That is why the knowledge of the English language is vital to our company's employers. During my time at IUT, I obtained diploma of Translator in the field of professional communication, which significantly elevated my English language knowledge. Also, **I graduated from a university in the USA with a major in Petroleum Engineering**, which positively influenced my further career. However, in IUT there were no English-language Master's program at the time of my studying there, but now, with Off-Shore Drilling and Geosteering programs appeared in the frame of Industrial University of Tyumen, the students have got a unique opportunity to obtain Master's diploma degree studying in English, which opens up a lot of opportunities to be employed in the international company, or Russian company working abroad.

I am **Elizaveta Laputina**, a 2015 graduate of Tyumen State Oil and Gas University (now Industrial University of Tyumen) with a major in Petroleum Engineering. Now I am working in the **Spanish company "Repsol"** in Moscow, and before that, after graduating from TSOGU, I obtained my Master's degree in Madrid, Spain; this international experience has become the first step in my career ladder. To be enrolled in an international university of such level and to get accepted in a company like Repsol, not only did I need to possess high-level technical skills, but also speak English fluently. That is why I am so glad to hear that these days English-language Off-Shore Drilling and Geosteering Master's programs are being open in Industrial University of Tyumen. After graduation from such programs, all the roads in our life would be open for you, and your successful career in petroleum industry will be secured.

### ADMISSION

FROM 15.05.2017  
TILL 30.07.2017

My name is **Alexander Boyko**, I graduated from Industrial University of Tyumen in 2012 with a degree in Petroleum Engineering. Now, **I work as a leading officer in the "Gazprom-neft-Offshore"** office in Saint-Petersburg. "Gazprom" is Russian company, having projects and partners abroad, that is why the English language is compulsory for an employer here. That is why, having learnt about the start of the English-language Master's programs in IUT, I can say with confidence that the students who will be enrolled in these programs, will have all the chances to be employed by and Russian or international oil company.
